Education

Arizona State University

3.93 GPA

Bachelor of Science, Major in Computer Science (Software Engineering)

Expected May 2027

- New American University - Kaplan International Scholarship
- Dean's List (2023 - Present)
- Related Coursework: Operating System, Distributed System, Data Structure and Algorithm, Data Analysis

Work Experience

Fullstack SWE Intern

Jan 2025 – May 2025

MoveCars | Rails 8, GraphQL, PostgreSQL, Tailwind, AWS

Chandler, AZ

- Built fullstack features for a logistics platform serving 15,000+ users, improving dispatch and transport workflows.
- Optimized PostgreSQL + GraphQL queries, reducing backend API latency by 40% and improving throughput.
- Rebuilt legacy frontend pages using Hugo + TailwindCSS, improving responsiveness and lowering UI support tickets.

Infrastructure SWE Intern

Jun 2024 – Aug 2024

Vietnam Airlines | .NET, MySQL, Redis, Docker, Azure DevOps, CI/CD

Ho Chi Minh City, Vietnam

- Modernized HR/payroll systems for 18,000+ employees, improving service reliability and maintainability.
- Containerized backend services using Docker and automated CI/CD pipelines with Azure DevOps, cutting deployment failures 30%.
- Optimized MySQL + Redis caching, improving data retrieval 35% and increasing system stability during peak load.

Backend Engineering Intern

Jun 2024 – Aug 2024

Vietnam Export Import Commercial Joint Stock Bank | Java SpringBoot, Microsoft SQL Server, Docker

Ho Chi Minh City, Vietnam

- Enhanced real-time financial rewards pipeline processing 5,000+ daily events, reducing workflow latency 30%.
- Built ACID-compliant SQL models and high-throughput query strategies, improving execution time 30%.
- Developed event-driven microservices enabling asynchronous processing and reducing end-to-end latency

Projects

Dreamscape @ ASU SunHacks 2025 | Vite, React Three Fiber, PostgreSQL, Gemini NLP

- Built an interactive 3D world-generation platform that transforms natural-language prompts into dynamic scenes using a custom **Gemini NLP pipeline**, achieving **90% accuracy** in intent and entity extraction.
- Implemented a real-time rendering engine with **React Three Fiber** and **Three.js**, constructing objects, lighting, and layouts directly from structured JSON “scene commands.”
- Designed a **PostgreSQL**-backed persistence layer to store scene components, user sessions, and version histories, enabling reproducible multi-step world creation workflows.

Arizona Tree AI @ ASU SunHacks 2024 | Vite, TypeScript, Python, FastAPI, Azure Maps, OpenAI Vision

- Developed a geospatial analytics pipeline using **FastAPI** to ingest environmental and spatial datasets, producing interactive heatmaps, overlays, and spatial queries rendered with **React + Azure Maps**.
- Integrated **OpenAI Vision** models to analyze aerial and satellite imagery, detecting tree coverage, vegetation health levels, and changes over time.
- Implemented spatial indexing and caching strategies to optimize map tile retrieval and compute efficiency, improving geospatial query performance by **35%**.

Leadership

President

April 2024 – Present

Vietnamese Students Union at ASU (VinaSU)

Tempe, AZ

- **Led a team of 20** to organize **10+ cultural and career development workshops**, engaging **900+ students** and fostering professional networking within the Vietnamese student community.
- Designed and implemented a mentorship program focused on career development, helping international students navigate career paths, prepare resumes, and gain internships.
- Established partnerships with guest speakers from **Amazon, Carvana, Perplexity, Simplify** and alumni to create an ongoing mentorship pipeline, ensuring continuous career support for international students.

Lead Technical Officer

August 2024 – Present

Claude Builder Club by Anthropic

Tempe, AZ

- Lead the technical direction of a **60+ member** AI builder organization, mentoring student engineers on LLM tooling, agentic workflows, and applied machine learning development.
- Architected and led development of a portfolio optimization and congressional insider trading intelligence platform, integrating LLM agents, financial data pipelines, and algorithmic analytics to surface abnormal trading patterns and portfolio risk insights.
- Designed multi-agent workflows using Claude 3.5 Sonnet to automate document extraction, SEC filing parsing, transaction labeling, and investment thesis generation, reducing manual research time by **70%**.

Technical Skills

Languages: Java, JavaScript, C, C++, C#, TypeScript, SQL, Ruby, Python

Frameworks/Libraries: SpringBoot, React, Tailwind, .NET, Node.js, RestAPI, FastAPI, Vite, , Rails, AWS, Data Visualization, Data Modeling, Data Cleaning and Filtering, Tableau, Power BI, Langchain, Langgraph

Database: MongoDB, MySQL, PostgreSQL, SQLite, GraphQL

Tools: GitHub, Git, VS Code, WordPress, Visual Studio, Figma, Microsoft Office, Google Suite, Postman, Microsoft Azure, Asana
