☎ 602-214-1715 ✉ hieuthan1703@gmail.com 🔗 [linkedin.com/in/hieu-trong-than](https://www.linkedin.com/in/hieu-trong-than) 🌐 thehieusss.com

Technical Skills

Languages: Java, TypeScript, JavaScript, C/C++, C#, Python, SQL, Ruby
Frameworks & Technologies: Spring Boot, .NET, Angular, React, RESTful APIs, Node.js, FastAPI, Ruby On Rails
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Systems & DevOps: Linux, Git, CI/CD Pipelines, Docker, AWS S3, AWS EC2
Engineering Practices: Object-Oriented Design, Software Development Life Cycle (SDLC), Agile Development
Tools: GitLab, Visual Studio, VS Code, Postman, Azure DevOps, Microsoft Office

Professional Experience

Software Engineer Intern

May 2026 – Present

Rocket | Angular 20, ASP.NET Web APIs, SQL Server, NServiceBus

Detroit, MI

- Developing distributed systems applications using Angular 20+, ASP.NET Web APIs, and NServiceBus messaging infrastructure within an enterprise-scale engineering environment
- Contributing to microfrontend-based applications utilizing Module Federation architecture and service-oriented backend systems.
- Working with SQL Server, PostgreSQL functions, and Flyway database migrations to support scalable backend services and internal platform development.

Software Engineer Intern

Jan 2025 – May 2025

MoveCars | Rails 8, GraphQL, PostgreSQL, Typescript, React

Chandler, AZ

- Delivered production backend features in Ruby on Rails using GraphQL and PostgreSQL, enabling scalable workflows for a platform serving 15,000+ active users across core operational modules.
- Reduced API latency by 40% by profiling and optimizing PostgreSQL queries and GraphQL resolvers through indexing, execution-plan tuning, and query restructuring, improving system responsiveness under production load.
- Increased frontend maintainability and UI performance by refactoring legacy components in TypeScript and React, standardizing architecture, and improving responsiveness across high-traffic user flows.

Software Engineer Intern

Jun 2024 – Aug 2024

Vietnam Airlines | C#, .NET, MySQL, Docker, Azure DevOps

Ho Chi Minh City, Vietnam

- Developed and enhanced backend payroll modules in C# and .NET for a system serving 18,000+ employees, improving validation logic and reducing processing errors during monthly payroll runs.
- Optimized MySQL queries time by via execution-plan analysis and indexing, reducing peak-load query latency by 100ms.
- Automated build and deployment workflows by containerizing .NET services with Docker and configuring CI/CD pipelines in Azure DevOps, decreasing manual release effort and improving deployment reliability.

Projects

Dreamscape @ ASU SunHacks 2025 | <https://github.com/The-Hieusss/dreamscape>

- Built a 3D world-generation platform that transforms natural-language prompts into structured scene commands using a custom NLP pipeline with Gemini API, achieving 90% intent and entity extraction accuracy.
- Enabled reproducible multi-step world creation by implementing real-time rendering with React Three Fiber and Three.js and persisting structured scene states in PostgreSQL-backed versioned workflows.

Arizona Tree AI @ ASU SunHacks 2024 | <https://github.com/Gabenn1/TreeZona>

- Developed a geospatial analytics pipeline using Python and FastAPI to ingest environmental datasets and render interactive heatmaps and overlays with React and Azure Maps.
- Improved geospatial query performance by 35% by integrating OpenAI Vision-based imagery analysis with spatial indexing and caching strategies for optimized tile retrieval and compute efficiency

Leadership

Lead Technical Officer

August 2025 – Present

Claude Builder Club by Anthropic

Tempe, AZ

- Lead the technical direction of a **60+ member** AI builder organization, mentoring student engineers on LLM tooling, agentic workflows, applied machine learning and application development
- Architected and led development of a portfolio optimization and congressional insider trading intelligence platform, integrating LLM agents, financial data pipelines, and algorithmic analytics to surface abnormal trading patterns and portfolio risk insights.
- Designed multi-agent workflows using Claude 3.5 Sonnet to automate document extraction, SEC filing parsing, transaction labeling, and investment thesis generation, reducing manual research time by **70%**.

Education

Arizona State University

3.84 GPA

Bachelor of Science, Major in Computer Science (Software Engineering)

Expected May 2027

- * New American University - Kaplan International Scholarship
- * Dean's List (2023 - Present)
- * Related Coursework: Operating System, Distributed System, Data Structure and Algorithm, Object-Oriented Programming
